

HOWLER PRESENTS · PREPARED FOR MILK & COOKIES

Pulse. Your event's data, finally **working** for you.

Howler is the Experience Operating System for live events, and Pulse is our new flagship product: one white-label platform that turns your ticketing, cashless and web data into insight, action and results. Live dashboards, an AI analyst that knows your event, and campaigns that reach exactly the right people, in your brand, on your phone.

Live dashboards with the Owl one tap away. Screens are illustrative; the numbers are Milk & Cookies' real Pulse data, pulled live on 9 July 2026.

"See what's happening, act on it, and prove the results, on your phone, in your brand. One platform, one login, one living loop: the longer you use Pulse, the better it gets."

Six things you'll feel in the first month

Wake up already knowing

A personal morning briefing and scheduled digests tell you what changed overnight and what's worth doing about it. No digging, no logging in to check.

Ask your data anything

The Owl is your own AI analyst: in the app, on WhatsApp, even from ChatGPT or Claude. Plain-language questions, grounded answers, only ever from your own data.

Act in one tap

Reach exactly the right people with on-brand email and SMS, drafted for you, approved by you. From spotting a cohort to a campaign in minutes, not days.

Make your ads work harder

Send Pulse audiences to Meta and TikTok, keep them fresh automatically, and see what the spend actually returned, next to your ticket sales.

Prove the results

Set the target that matters, like your 18 000-ticket North Star, and every screen shows how you're tracking and where you'll land.

Own event night

A live command centre for gates, bars and devices, with a compact report to the team's phones through the night. You'll know before the queue does.

How big is our abandoned-cart audience, and where are we against the ticket goal?

Your **Abandoned carts** segment holds **3 396 contactable people**. Ticket sales stand at **17 812 of the 18 000 North Star (99%)**, with General Access Phase 1 the top seller at 2 877.

 in ChatGPT & Claude · via the Pulse connector · scoped to your events

One brain, one boundary

Every door goes through the same server-side scope gate: the Owl answers **only your events**, grounded in your data, it quotes, it never invents. Keys are read-only and revocable per client.

ONE PARTNER, END TO END

The Howler One stack: one experience, one dataset

Ticketing, cashless payments, the fan SuperApp and VIP table management, run by one partner, feeding one dataset, wrapped in your brand. Pulse is the brain that turns all of it into decisions.

ONE STACK · ONE DATASET · ONE BRAND EXPERIENCE · ONE PARTNER

And it's safely yours. Your data is scoped to you and never pooled or shared; every campaign passes your approval before it sends; consent and unsubscribe are handled properly. Your brand on the front, Howler doing the heavy lifting behind it.

Where to from here

You're 188 tickets from the 18 000 North Star, and there are 3 396 abandoned carts sitting in Pulse waiting to be asked nicely. **Let's close the goal together, live on your data.**
