

HOWLER PRESENTS · PREPARED FOR MILK & COOKIES

Pulse. Your event's data, finally **working for you.**

One white-label platform for your whole event. See it, act on it, prove it, on your phone, in your brand.

Live dashboards with the Owl one tap away. Screens are illustrative; the numbers are Milk & Cookies' real Pulse data, pulled live on 9 July 2026.

Pulse · flagship of the Howler Experience OS

THE PULSE LOOP

Insight → Action → Results. On repeat.

Data lands

Ticketing, cashless & web, live.

The Owl reads it

What changed, and what to do.

You act

One tap to the right campaign.

Results return

Revenue tracked, back on your dashboards.

It tightens

Every cycle sharper than the last.

Not dashboards *and* email *and* reports. One living loop, and the longer you run it, the smarter it gets.

ONE PARTNER, END TO END

One stack. One dataset. Every layer makes the next smarter.

One connected stack that sells the ticket, takes the payment, hosts the VIP and lives in the fan's pocket, all feeding one dataset that Pulse turns into action.

Ticketing

The box office: ticket sales, tiers & releases, access control and scanning at the gates, every buyer and every entry, captured from the first on-sale minute.

Cashless Payments

Tap-to-pay across bars, vendors and top-ups: faster queues, higher spend, zero cash risk, and every transaction lands as live data, per station.

SuperApp

The fan's companion: tickets, cashless top-ups, line-ups and offers in one place, a direct, ownable channel to every attendee, before, during and after.

VIP Table Management

Premium done properly: table inventory, bookings and minimum spends, hosted service, your highest-value guests, managed and measured.

Pulse

The brain of the stack. Every ticket scanned, every tap at a bar, every SuperApp session and every VIP booking flows into one governed dataset, where the Owl reads it, your team acts on it, and the results come back measured. Insight → action → results, across the whole operation.

ONE STACK · ONE DATASET · ONE BRAND EXPERIENCE · ONE PARTNER

Better together: the bar

Cashless flags the Main Bar spiking; the Owl moves two devices from a quiet station, while the night is young.

Better together: the fan

Ticket, top-up, three bars, one picture, so your next campaign targets the big spenders who haven't rebooked.

SEE · ASK

Open the app and **you already know what to do.**

SEE · dashboards & AI insight know what's happening, without digging

Live dashboards on your real ticketing & web data, mobile-first.

A personalised AI briefing, what matters right now, in plain English.

Goals with pace & forecast, ahead / on-track / behind, at a glance.

ASK · your AI Data Analyst, everywhere plain-language answers, only from your data

Ask anything in plain language, answers scoped to your data.

Reads your own documents too, budgets, plans, sponsor decks.

Your Friday briefing · Milk & Cookies

from Milk & Cookies via Pulse · Fridays 07:00 · to the exec team

Morning! The short version: M&C JHB | 26 stands at 17 812 tickets, 99% of the 18 000 goal, with R18.96m gross. General Access Phase 1 leads (2 877); Golden Circle holds 1 782. 188 tickets to go.

17 812

SUGGESTED ACTIONS

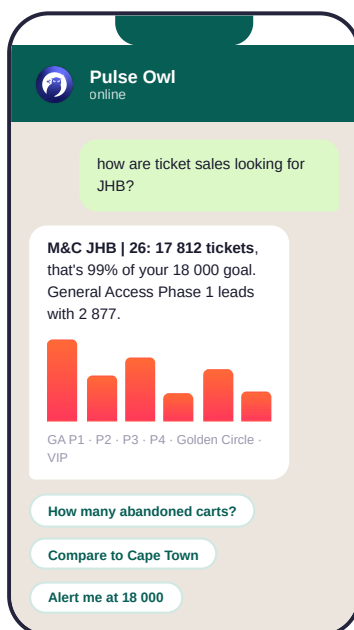

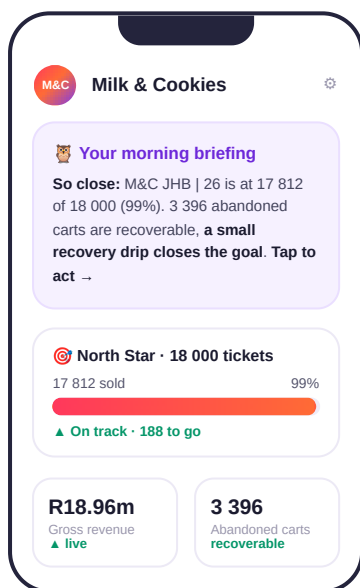

- **Recover the 3 396 abandoned carts:** 188 sales closes the goal
- **Send "Everyone's going. Are you? 🐼"** to the 18–22 audience (1 775 reachable)
- **Set the sell-out alert** at 18 000 tickets

The scheduled digest, built on Milk & Cookies' live numbers: a role-specific read of the week, with the next actions attached.

MEET YOUR TEAM WHERE THEY ARE

One brain. Every screen your team uses.

One Owl at the centre; the doors your team already uses around it. Same answers, same boundary, whichever one you walk through.

How big is our abandoned-cart audience, and where are we against the ticket goal?

Your **Abandoned carts** segment holds **3 396 contactable people**. Ticket sales stand at **17 812 of the 18 000 North Star (99%)**, with General Access Phase 1 the top seller at 2 877.

in ChatGPT & Claude · via the Pulse connector · scoped to your events

One brain, one boundary

Every door goes through the same server-side scope gate: the Owl answers **only your events**, grounded in your data, it quotes, it never invents. Keys are read-only and revocable per client.

On the couch, at the gate, or at your desk, same Owl, same answer.

Every door leads to the same brain, and when something matters, the Owl pushes it to whichever screen you're on.

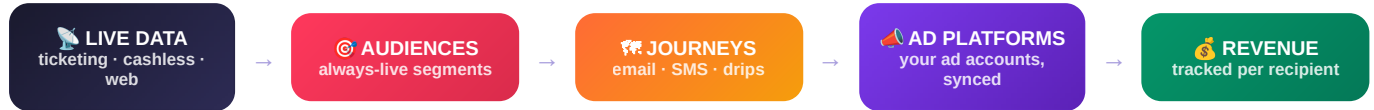

WHY HOWLER

One partner. Not four vendors and five spreadsheets.

One stack, one dataset, one team to call, and the data compounds with every event you run.

A cohort on a chart → tracked revenue.

Audiences, journeys, ad platforms and attribution, the whole growth stack on **one live dataset**. No exports, no stale lists.

Audiences that never go stale

Built from a tile, a sheet or a list, they **re-resolve live at send time**. Slice by ticket type, city, age or spend.

Live data → your ad accounts

Push a segment to your ad accounts, privacy-safe and auto-synced, then see **ROAS next to actual ticket sales**.

Complex journeys, simple setup

- | | | |
|--------------------|------------------------|----------------|
| 1 · Reminder email | <div><div></div></div> | 3 396 enrolled |
| 2 · +4h nudge | <div><div></div></div> | 58% opened |
| 3 · +24h promo SMS | <div><div></div></div> | 31% clicked |

✓ 188 recoveries would close the 18 000 goal · buyers auto-exit

Your real Abandoned carts segment (3 396 people) worked automatically: timed steps, per-step copy and promo, true real-time enrolment. Step rates shown are illustrative.

Attribution you can defend

Per-recipient opens, clicks and **tracked purchases**; promo codes that tie a sale to a send.

Guardrails a CMO will love

Approval gates, POPIA-aware per-channel consent, and **send caps** so a big blast never becomes an expensive accident.

Already bought → exclusion list

17 812 buyers leave the ads automatically

Healthy

Contact details are protected before they ever leave Pulse, the ad platforms never see raw personal data.

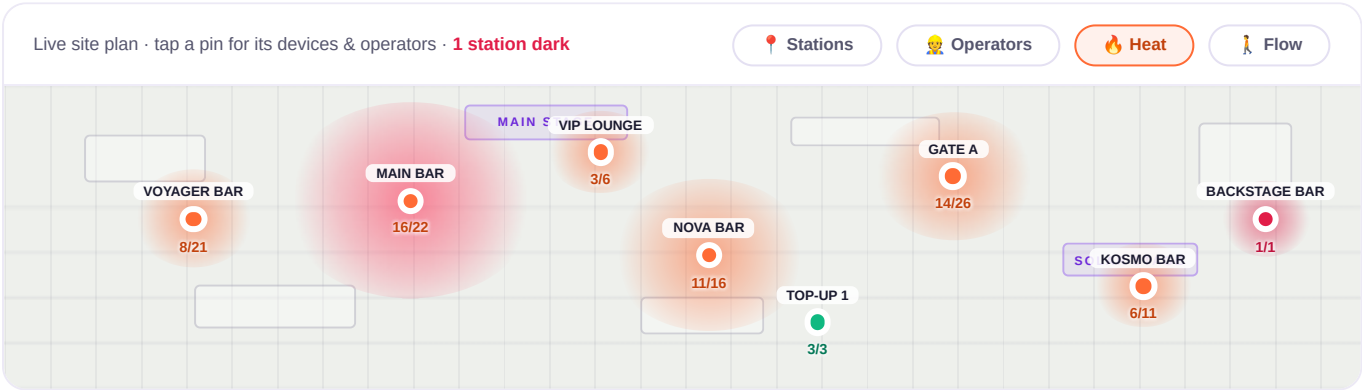

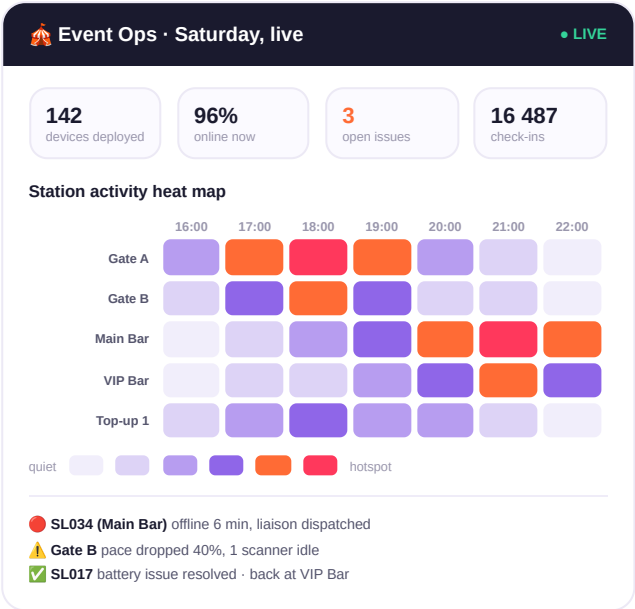

The Owl designs the email (that subject line is a real draft in your account); the audiences are your real segments, mirrored daily.

ON THE GROUND

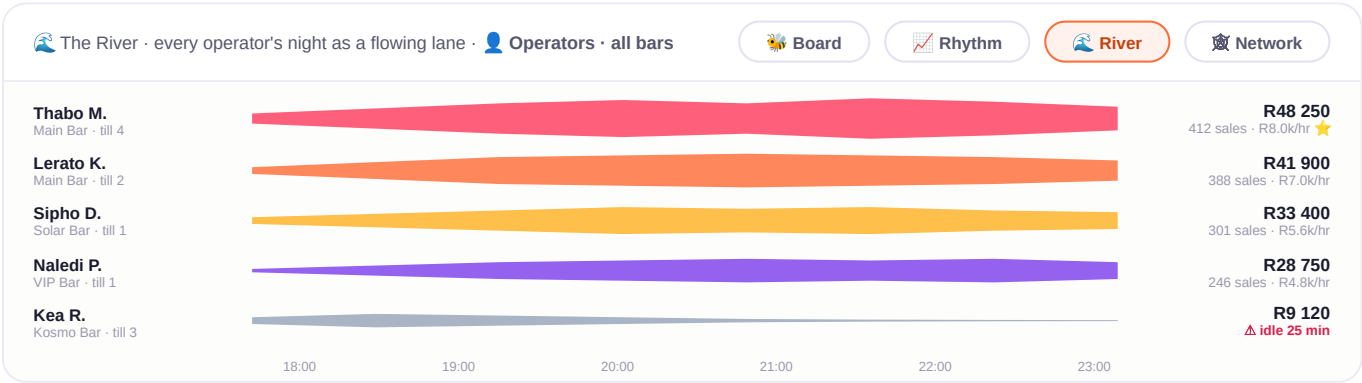

See the whole floor, live — before the queue does.

The gates, the bars, the devices, the data itself, on one phone-first console. No clipboard, no frantic group chat.

- The live overview**, the whole operation on one board: devices, stations, open issues.
- Hotspots & heat map**, watch the crowd move; staff the busy station, not the dead one.
- Bar & operator performance**, who's flying and which till has gone quiet, live.
- Connectivity & data health**, know a scanner died before the queue does.
- Live updates & alerts** to your phone, on any number that matters.

Your venue's own site plan, live: every station pinned, heat showing where the crowd is spending right now, and a dark station flagged the moment its data stops flowing.

RUN IT, PROVE IT, OWN IT

Run it. Prove it. Own it.

RUN · the everyday relationship everything with Howler, in one tracked place

Messaging inbox, two-way with read/ack trails, no more scattered chats.

Everything in one place, every event's documents next to the numbers they explain.

Settlements that read themselves, PDFs become statements; the Owl checks and files them.

OWN · white-label, security & openness your brand, your accounts, your data

Fully white-label, your logo, colours, sender name and login, on your own domain.

POPIA-minded by design, per-channel consent, protected identities, no data pooling.

Watertight data scoping, force-filtered to your events server-side; fails closed.

Open by design, read-only per-client keys; connect the AI assistant of your choice. Never locked in.

If you're using...	The gap	What Pulse changes
A dashboard tool	You see the problem, then export the data and switch tools to act on it.	See it and act on it in the same governed place, campaign, approval, result.
An email tool	Audiences go stale the moment you upload them.	Audiences built from live ticketing data that re-resolve at send time.
Email + chat threads	Approvals, settlements and "did you see this?" get lost.	One inbox with read/ack trails; settlements that file themselves.
Gut feel on event night	You find out about problems when the queue does.	A live ops board, alerts, and a mini report every 30 minutes, on your phone.

The pitch, in one line

See what's happening, act on it, and prove the results, on your phone, in your brand, without exporting to five tools.

Insight → action → results → improvement, on a loop, in one governed place.
