

HOWLER PRESENTS

Pulse. Your event's data, finally **working for you.**

Pulse is the Experience OS for event organisers — one white-label platform that turns your ticketing, cashless and web data into **insight** → **action** → **results**. Live dashboards, an AI analyst that explains your numbers, scheduled briefings, and a full email/SMS campaign engine — all powered by the same governed data, all scoped to you, all in your brand, all on your phone.

One loop that never stops turning — **not five disconnected tools**

▶ ▶ ▶ **insight** → **action** → **results** → **improvement, on repeat** ▶ ▶ ▶

vs. a BI tool (Looker / Tableau)

Dashboards show you the problem, then leave. Pulse **acts** on the data — campaigns, approvals, ad-audience sync — in the same place you saw it.

vs. an email tool (Mailchimp / Klaviyo)

No CSV gymnastics. Pulse audiences come straight from your **live ticketing data**, stay current automatically, and are governed & scoped to you.

vs. doing it manually

An installable app that **pings your phone** when a number matters — a nudge lands, you tap, you're in the right place to act. No logging in to check.

"It's not dashboards and email and reports — it's one living loop. Your data tells you what to do, you do it in the same place, and the result makes the next call smarter. The longer you use Pulse, the better it gets."

Everything an organiser needs, in one place

SEE — dashboards & AI insight know what's happening, without digging

Live dashboards LIVE — KPIs, tables and charts on your real ticketing & GA4 data, with drill-through. Mobile-first and installable as an app.

Per-tile AI insight LIVE — tap any tile and the Owl explains the numbers and answers follow-ups, grounded in that data.

Share any insight LIVE — hand a finding to email, WhatsApp or Slack in one tap, with a link back to the view.

Personalised AI briefing LIVE — land on a plain-English summary of what matters right now, tailored to what you follow.

Scheduled digests LIVE — role-specific email briefings (exec / marketing / finance / ops) on your cadence, with charts rendered in the email.

Goals with pace & forecast BETA — set a North Star target; every screen shows ahead / on-track / behind vs last event's real sell-curve, with a projected landing.

"Your data, read for you — open the app and you already know what changed and what to do."

ASK — your AI Data Analyst, everywhere plain-language answers, only from your data

Ask the Owl in-app BETA — "what's on sale right now?", "how does this compare to last year?" — conversational answers scoped to your data.

Reads your Google Drive NEEDS SETUP — share budgets, marketing plans or sponsor decks and the Owl answers from them alongside live sales data.

The Owl on WhatsApp BETA — message the Owl from your own WhatsApp: answers, charts as images, tappable follow-ups, daily updates, even draft a campaign by reply button.

Fan Owl on your website BETA — a booking-guide widget on your public event site: answers FAQs from your knowledge base, recommends the right ticket, links to your own checkout, and captures opted-in fans for remarketing.

"Ask your data anything, in plain language — your own analyst, in your pocket."

ACT — Engage, the campaign engine from seeing a cohort to reaching it, in one click

Live segments LIVE — build audiences from a dashboard tile, a CSV, or a linked Google Sheet; combine with union / intersect / exclude (e.g. abandoned carts *minus* already-called). Always current at send time.

Drip automations LIVE — abandoned-cart recovery journeys that catch new abandoners in real time, stop automatically when someone buys, and show a per-step conversion waterfall.

Approvals & consent built in LIVE — nothing sends without explicit approval; POPIA-aware consent enforced per channel; send caps stop costly mistakes.

Email & SMS campaigns LIVE — AI-drafted copy, a drag-and-drop block builder, AI-designed layouts & banners, merge fields, promo codes, full open/click tracking.

Ad-platform sync NEEDS CONNECTION — push a segment to Meta or TikTok as a Custom Audience (privacy-safe, hashed), auto-synced daily; see spend, ROAS and paid results next to ticket sales.

Owl auto-pilot LIVE — one tap turns an AI suggestion into a drafted campaign; it still rides the normal review + approval gates.

"Personalised, on-brand email + SMS to a precise audience — with approval gates and real tracking, all from the same data."

Built for event day — and for **your brand**

 **RUN — event day & operations** your control room, in your pocket

Alerts **BETA** — “tell me when VIP drops below 100”: Pulse watches the number and pings you via push, email or SMS the moment it crosses. No spam — cooldowns, quiet hours, plain-English rules.

Messaging inbox **LIVE** — a two-way client ↔ Howler inbox with read/acknowledge trails; important notes and approvals stop living in scattered WhatsApps.

Event Ops **BETA** — track every scanner, payment device and station live: scan to move, log issues, full audit trail. Every device accounted for at event close.

Live updates **BETA** — while the event runs, a compact multi-metric report every 15–120 min: gates pace, bar revenue, top vendors, device health, % of last year — to inbox, push, SMS and WhatsApp.

Settlements that read themselves **LIVE** — settlement PDFs become clean interactive statements; CC the Owl on the email and it files & publishes them automatically (human-checked if totals don't reconcile).

Data health **BETA** — know a scanner has stopped sending data before the queue does, with an AI diagnostics report you can forward to the network provider.

 **OWN — white-label, security & openness** your brand, your accounts, your data

Fully white-label **LIVE** — your logo, colours and sender name everywhere; emails from your own domain once verified; even a vanity login page that feels like *your* product.

Watertight data scoping **LIVE** — every query is force-filtered to your events server-side; it can't be bypassed and fails closed. One client can never see another's data.

Open by design (API + AI agents) **BETA** — read-only, per-client API keys; point Claude or ChatGPT at your data via MCP and ask questions in plain language. Your data is never locked in.

Your language & currency **LIVE** — AI insights, briefings, digests and campaign copy in your reporting currency and your choice of language.

POPIA-minded by design **LIVE** — per-channel consent, one-click unsubscribe, hashed identities for ad sync, no cross-client data pooling.

Self-service, with backup **LIVE** — manage everything yourself in Settings, or your Howler team does it for you. Your named Howler contacts are one tap away.

If you're using...	The gap	What Pulse changes
Looker / Tableau	You see the problem, then export a CSV and switch tools to act on it.	See it and act on it in the same governed place — campaign, approval, result.
Mailchimp / Klaviyo	Audiences go stale the moment you upload them.	Audiences built from live ticketing data that re-resolve at send time.
Email + WhatsApp threads	Approvals, settlements and "did you see this?" get lost.	One inbox with read/ack trails; settlements that file themselves.
Gut feel on event night	You find out about problems when the queue does.	Alerts + live mini-reports every 30 minutes, on your phone.

The pitch, in one line

See what's happening, act on it, and prove the results — on your phone, in your brand, without exporting to five tools.

Insight → action → results → improvement, on a loop, in one governed place.

Ask your Howler account manager for a live demo →
